## Fluoridated Mind Control Of The Masses

The Nazi's scheme used water fluoridation to control prisoners and the public. At the end of the Second World War, the United States Government sent Charles Eliot Perkins, a research worker in chemistry, biochemistry, physiology and pathology, to take charge of the vast Farben chemical plants in Germany. While there he was told by the German chemists of a scheme which had been worked out by them during the war and adopted by the German General Staff. This was to control the population in any given area through mass medication of drinking water. In this scheme, sodium fluoride played a prominent role. Repeated doses of small amounts of fluoride will in time reduce an individual's power to resist domination by slowly poisoning and narcotizing a certain area of the brain and will thus make people more submissive to the will of those who wish to govern them. Both the Germans and the Russians added sodium fluoride to the drinking water of prisoners of war to make them stupid and docile.
