## NHANES Periodontal Examination Protocols -History

NHANES III  
1988 – 1994

- Partial Mouth
- Two Quadrants
- **Two** sites per tooth – **64** sites per subject

NHANES  
2001 - 2004

- Partial Mouth
- Two Quadrants
- **Three** sites per tooth – **96** sites per subject

NHANES  
2009 -2014

- Full Mouth
- All Four Quadrants
- **Six** sites per tooth – **192** sites per subjects

## Case Definitions Proposed for Population-Based Surveillance of Periodontitis

**Severe Periodontitis:**  $\geq 2$  interpromixal sites with CA loss  $\geq 6$  mm (not on same tooth) and  $\geq 1$  interproximal sites with PD  $> 5$  mm

**Moderate Periodontitis:**  $\geq 2$  interproximal sites with CA loss  $\geq 4$  mm (not on same tooth); OR  $\geq 2$  interproximal sites with PD  $> 5$  mm (not on same tooth)

**Mild Periodontitis:**  $\geq 2$  interproximal sites with  $\geq 3$ mm CA loss, and  $\geq 2$  interproximal sites with  $\geq 4$  mm pocket depth (not on same tooth) or 1 site with  $\geq 5$  mm PD

**No Periodontitis :** No evidence of mild, moderate or severe periodontitis

# NHANES 2009 - 2010

- Stratified multistage probability sample of the civilian non-institutionalized U.S. population
- $\geq 30$  years old
- Exams by dental hygienist in the Mobile Examination Center (MEC)
- Recorded gingival recession and pocket depth
- Six sites per tooth on all tooth (except third molars)
- No Bleeding on Probing (BOP) assessed
- 3743 completed exams
- Representing weighted population of 137.1 million
- First time use of the FMPE protocol in NHANES

## Prevalence of Periodontitis in U.S. Adults $\geq 30$ years

## Prevalence: Full Mouth Examination Protocol (FMEP) vs. Partial Mouth Examination Protocols (PMEP)

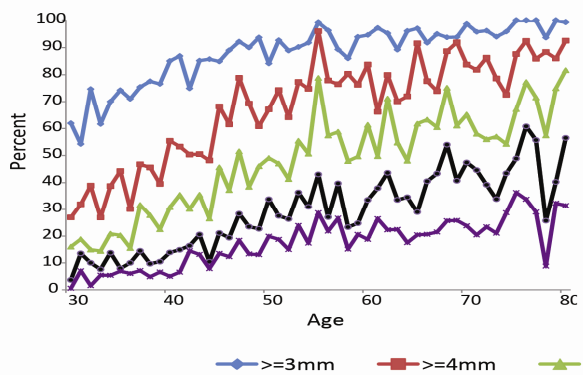

(1) NHANES 09-10 FMEP (2) NHANES 00-04 PMEP (3) NHANES III PMEP

## Prevalence of Periodontitis by Age Groups

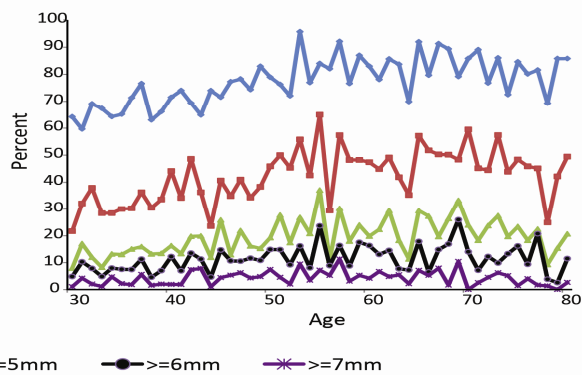

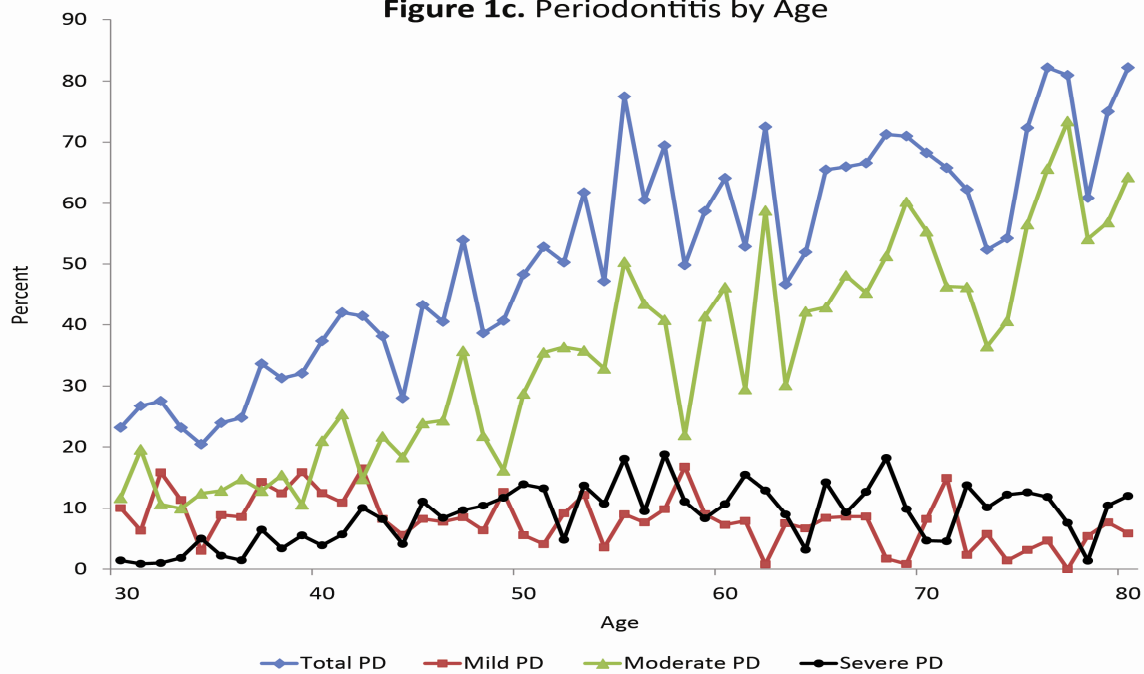

**Figure 1a. Percentage of Attachment Loss by Age**

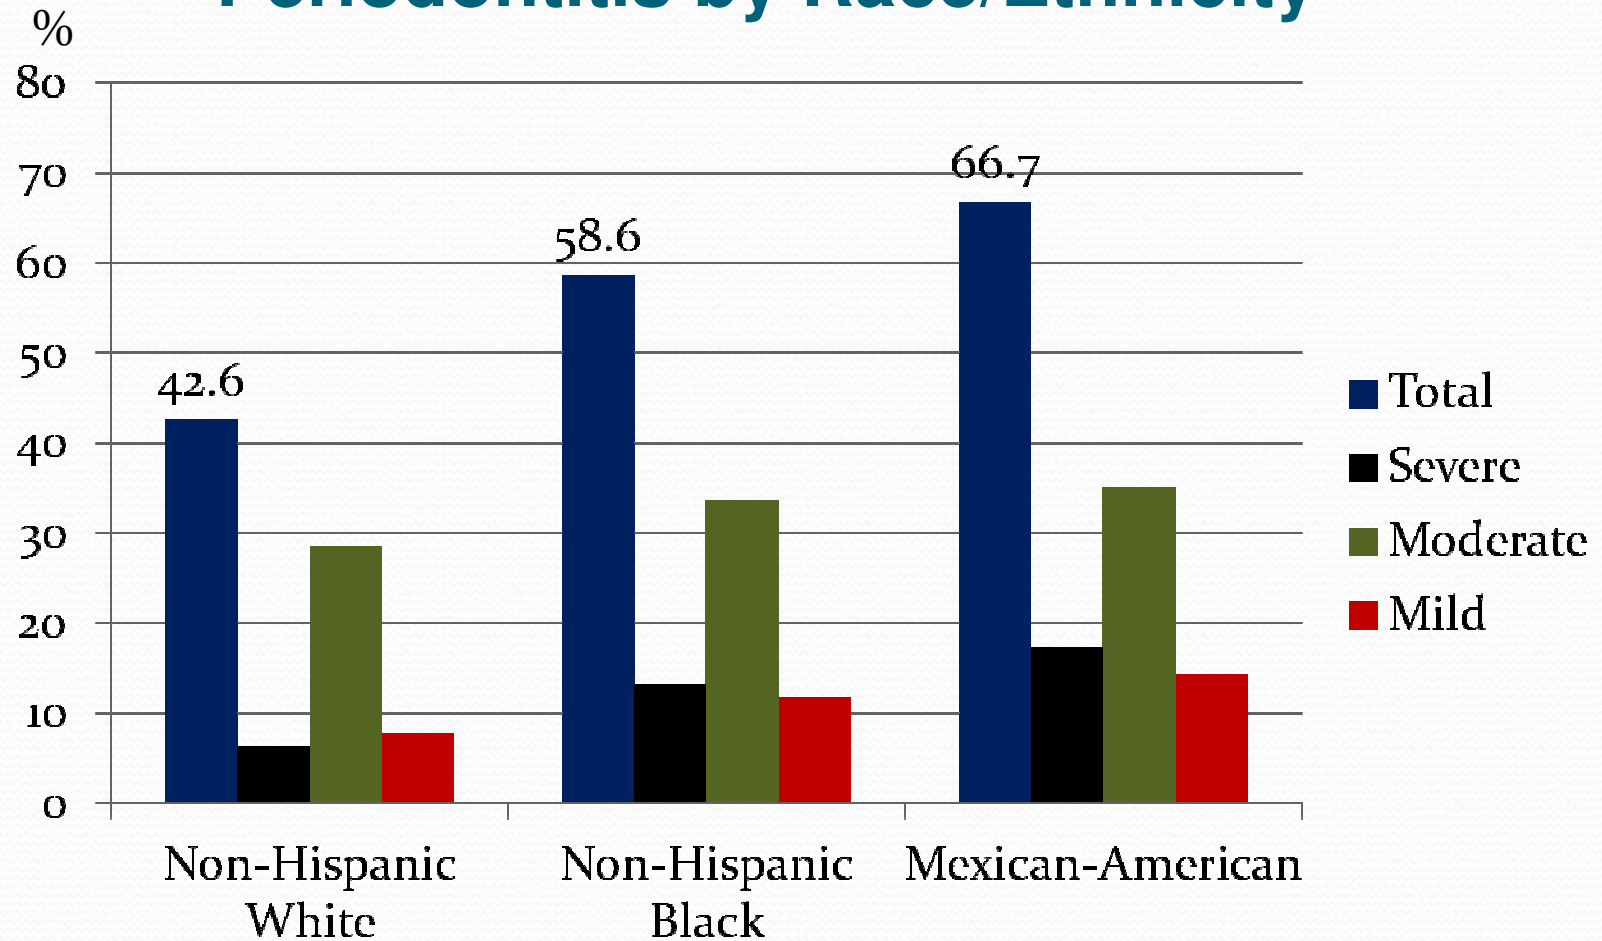

**Figure 1b. Percentage of Probing Depth by Age**

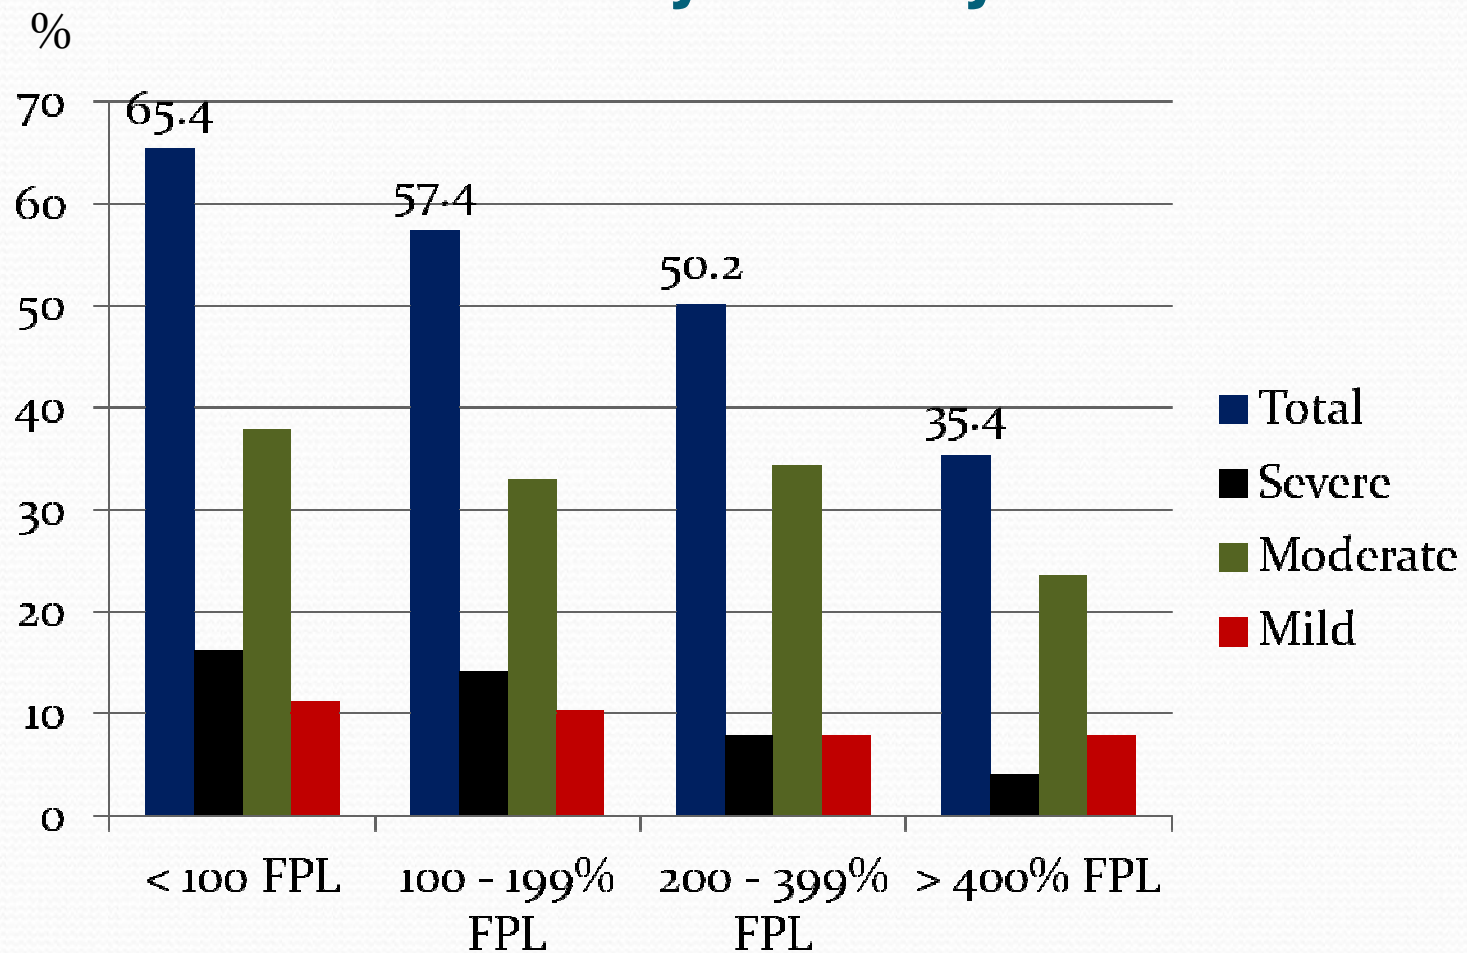

**Figure 1c. Periodontitis by Age**

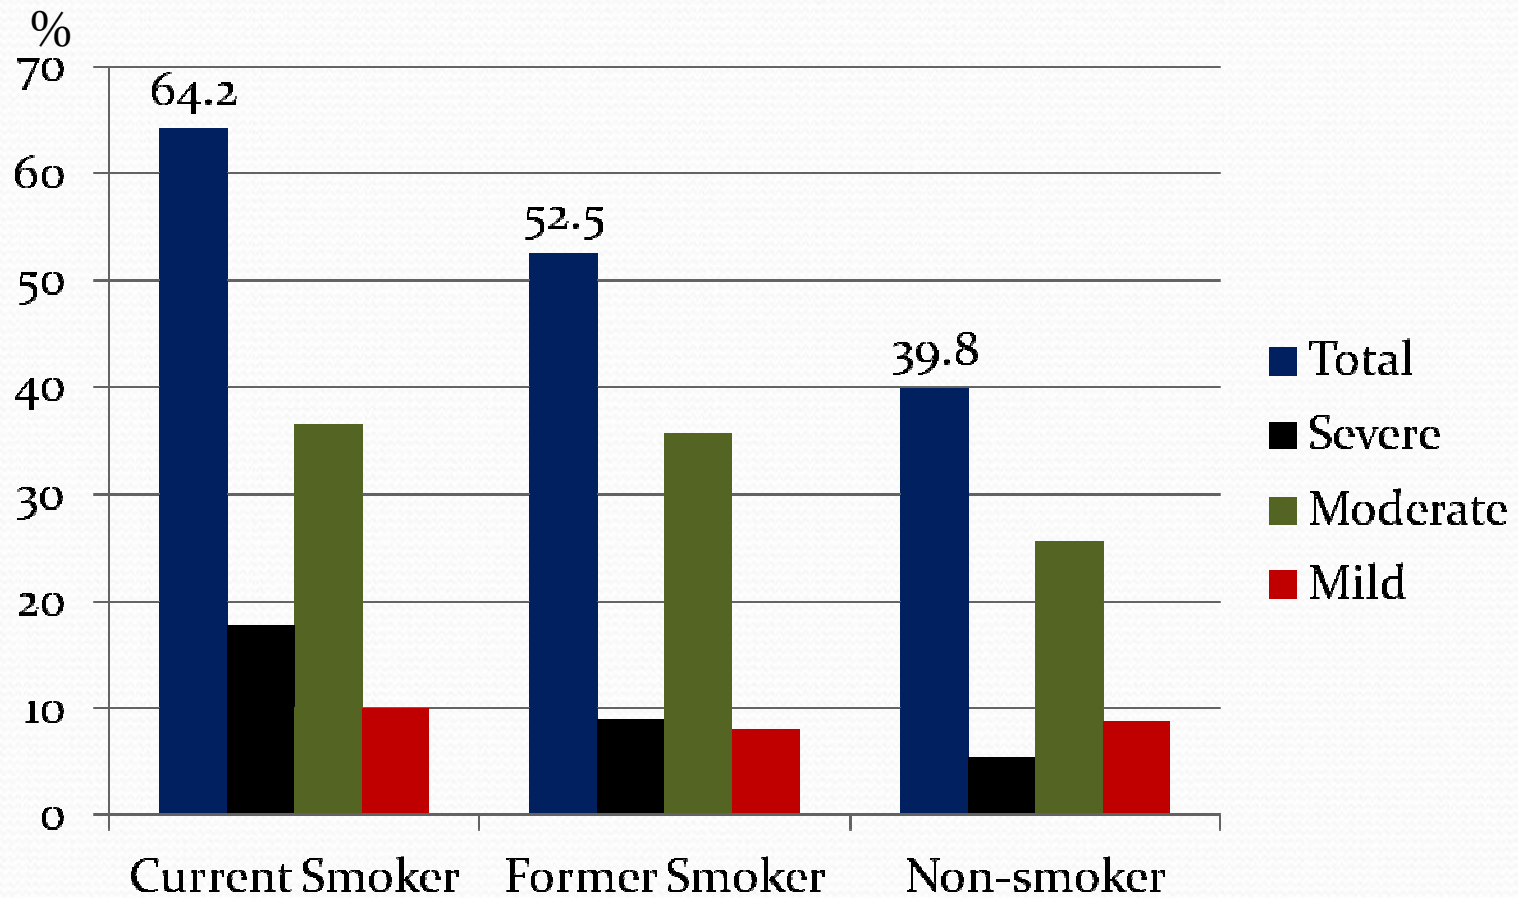

## Periodontitis by Race/Ethnicity

## Periodontitis by Poverty Levels

## Periodontitis by Smoking Status

## Self-Report Measures for Surveillance of Periodontitis: Progress Update

- Collaboration between CDC, the American Academy of Periodontology (AAP), and subject matter experts in academic settings since 2003.
- Completed systematic literature review.
- Identified potential questions based on analyses of surveys that utilized self-report questions to assess periodontitis.
- Developed standard cases definition for surveillance of periodontitis.
- Completed cognitive testing of the questions in U.S. adults.
- Pilot tested questions in Australian adult population.
- Pre-tested question in a convenience sample of U.S. adults.
- Validation of questions versus clinical cases of periodontitis in a representative U. S. adult population (NHANES 2009 – 2010).
- Manuscript on the findings from NHANES 2009/2010 in final stages.

## Self-report Questions

1. Gum disease is a common problem with the mouth. People with gum disease might have swollen gums, receding gums, sore or infected gums or loose teeth. {Do you/Does SP} think {you/s/he} might have gum disease?
2. Overall, how would {you/SP} rate the health of {your/his/her} teeth and gums?
3. {Have you/Has SP} ever had treatment for gum disease such as scaling and root planning, sometimes called deep cleaning?
4. {Have you/Has SP} ever had any teeth become loose on their own, without an injury?
5. {Have you/Has SP} ever been told by a dental professional that {you/s/he} lost bone around {your/his/her} teeth?
6. During the past three months, {have you/has SP} noticed a tooth that doesn't look right?
7. Aside from brushing {your/his/her} teeth with a toothbrush, in the last seven days, how many days did {you/SP} use dental floss or any other device to clean between {your/his/her} teeth?
8. Aside from brushing {your/his/her} teeth with a toothbrush, in the last seven days, how many days did {you/SP} use mouthwash or other dental rinse product that {you use/s/he uses} to treat dental disease or dental problems?

## Preliminary Findings – NHANES 2009/10

		Total Periodontitis	CAL $\geq$ 3 mm	PD $\geq$ 4 mm
# of questions		5	4	5
Sensitivity		85%	94%	76%
Specificity		58%	31%	58%
ROC		0.81	0.82	0.75

# ROC curve for periodontal diseases

## CONCLUSION

- 1st time: Direct evidence for high burden of PD
- Moderate PD increases with age
- Severe & mild PD remain < 15% across all ages
- Disparities by SES and race/ethnicity
- Important implications for aging US population
- Data collection continues to 2014
- Self-report questions are promising based on NHANES 2009/2010 data.

The background is a solid blue gradient. The top edge is wavy, with a lighter blue band at the very top. A decorative line, composed of small dashes in various colors (white, light blue, green, yellow), runs across the top of the page, just below the wavy edge.

**Thank You**
