

# Identifying Dental Deserts in the Los Angeles County Safety Net using GIS Maps

Maritza Cabezas, DDS, MPH  
Dental Director  
Oral Health Program

# Background:

- Los Angeles County is the most populous and most diverse county in the US.
- How can issues related to **access to dental care** be addressed based on **data** and **facts** in such **a complex system**?

Q: How can someone plan for dental expansion in this vast and complex environment?

# Facts About Los Angeles County:

- **LA County:**

- Population: estimated to be more than 10 million
- The most populous and most diverse county in the US
- Size: 4,058 square miles
- The county is larger than the combined areas of the states of Rhode Island and Delaware

- **Cities in Los Angeles County:**

- There are 88 cities in LA County
- LA City is the 2<sup>nd</sup> most populous city in the United States (New York City is the most, but consists of 5 boroughs/counties)

# Facts About Los Angeles County:

- Approximately 10% of county residents live outside of the 88 cities in unincorporated areas (137)
- The population of Los Angeles County is larger than 41 of the 50 states.
- More than 25% of California residents live in LAC
- Population density is very high: 2,420 people per square mile
- Los Angeles County has the highest number of millionaires and the largest number of homeless people of any county in the US

Q: How can someone plan for dental expansion in this vast and complex environment?

Answer: Using a **Geographic Information System (GIS)** Map with applicable **Data** sets.

### **The Power of Mapping:**

GIS lets us visualize, question, analyze, and interpret data to understand relationships, patterns, and trends.

# Objectives:

- Show how this complex system of dental care delivery can be analyzed by using GIS maps
- Define *Dental Deserts (DD)*
- Illustrated the steps used to identify the Dental Deserts
- Demonstrate how GIS helped with the identification of Dental Deserts
- Discuss next steps

## Demographics:

Who utilizes LAC DHS Dental Clinics?

Who are our patients?

# Patient Demographics: GENDER

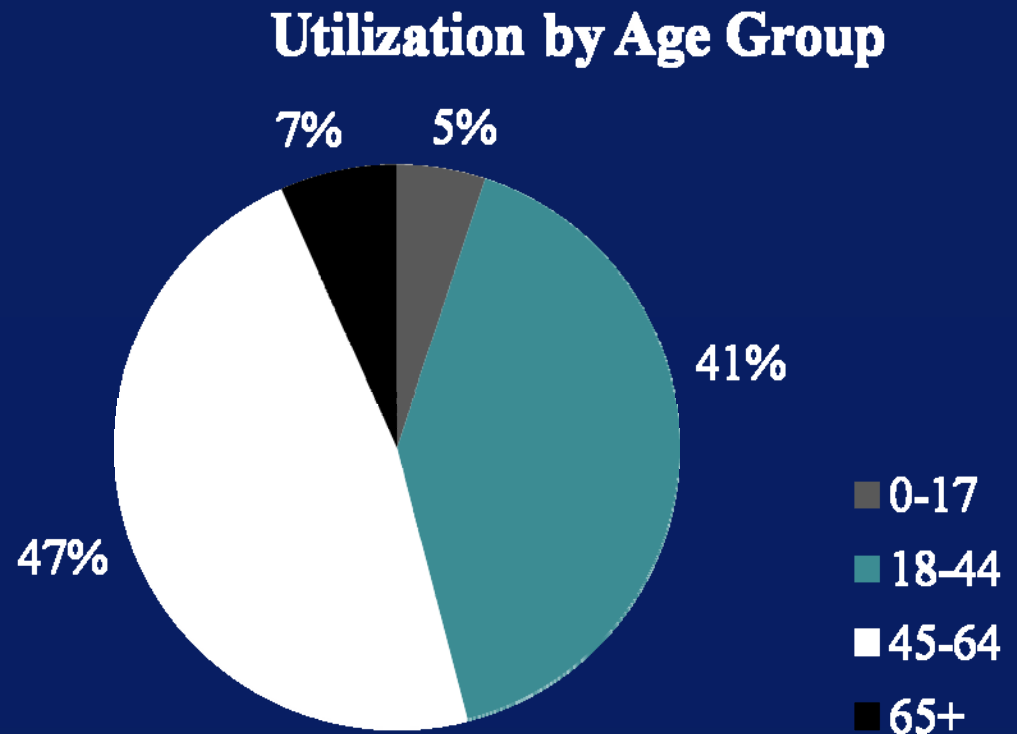

Number of Patients (FY 2012-13)		
Gender	Number	Percent
Female	16,513	55.8
Male	13,060	44.2
Unknown	2	0.0
<b>TOTAL</b>	<b>29,575</b>	<b>100.0</b>

## Utilization by Gender

# Patient Demographics: AGE

Number of Patients (FY 2012-13)		
Age Group	Number	Percent
0-107	122	0.4
5-14	753	2.6
15-17	609	2.1
18-24	2,310	7.8
25-34	4,589	15.5
35-44	5,189	17.6
45-54	7,094	24.0
55-64	6,919	23.4
65+	1,990	6.7
<b>TOTAL</b>	<b>29,575</b>	<b>100.0</b>

**Slide 12**

---

**NB2**

WHy did you decide to break up the pie chart into the 4 age groups? is that based on something?

Noel Barakat, 3/16/2016

# Patient Demographics: RACE/ETHNICITY

Number of Patients (FY 2012-13)		
Race/Ethnicity	Number	Percent
Hispanic	18,956	64.1
Black	5,892	19.9
White	2,242	7.6
Asian/Pi	1,151	3.9
Native American	71	0.2
Other/Unknown	1,263	4.3
<b>TOTAL</b>	<b>29,575</b>	<b>100.0</b>

Utilization by Race/Ethnicity

## Slide 13

---

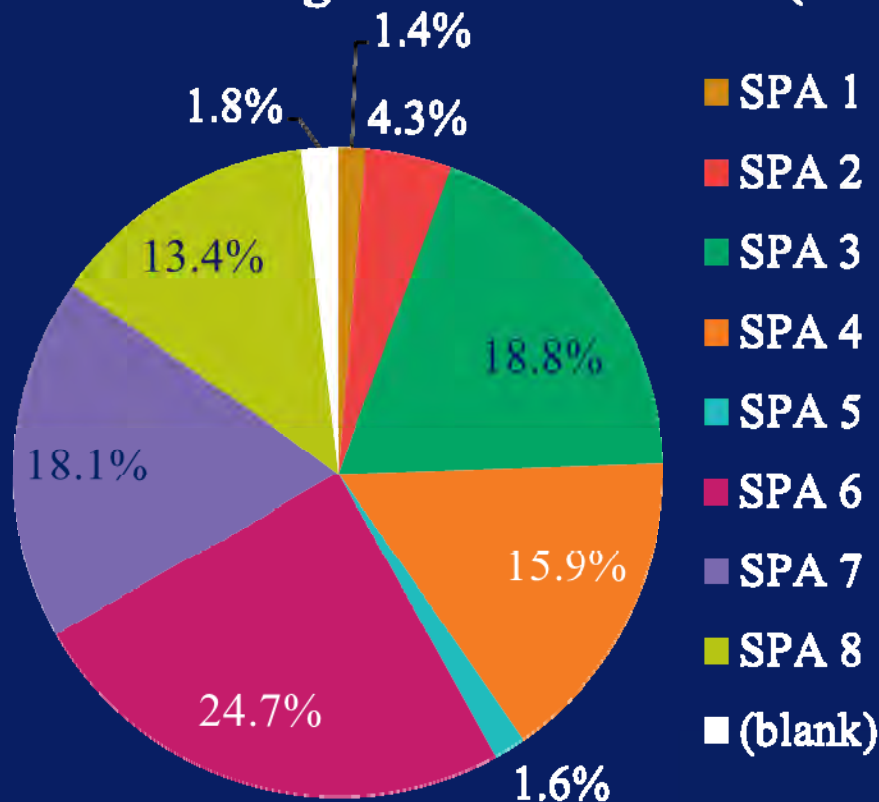

**NB6**

if you can do it easily, I think it would help to have the color coding on the table match the color coding of the pie chart. but its not a big deal if it is too cumbersome to do.

Noel Barakat, 3/16/2016

# Patient Demographics: Patients by Service Planning Area (SPA)

Percentage of Total Patients (FY 2012-13)

## Types of Dental Clinics Included in Map:

1. My Health LA (MHLA) Clinics
2. Comprehensive Health Centers (CHC)
3. Graduate Medical/Dental Education Institutions
4. Federally Qualified Health Centers (FQHCs)
5. Community Clinics
6. Dental Schools
7. School Based Clinics
8. Clinics that treat only HIV patients
9. Clinics that treat only Children

## Initial Data and First GIS Map

At first glance the map portrayal of  
Access to dental care was  
deceiving....

# Dental Services in Los Angeles County

# Looking for Need and Disparities....

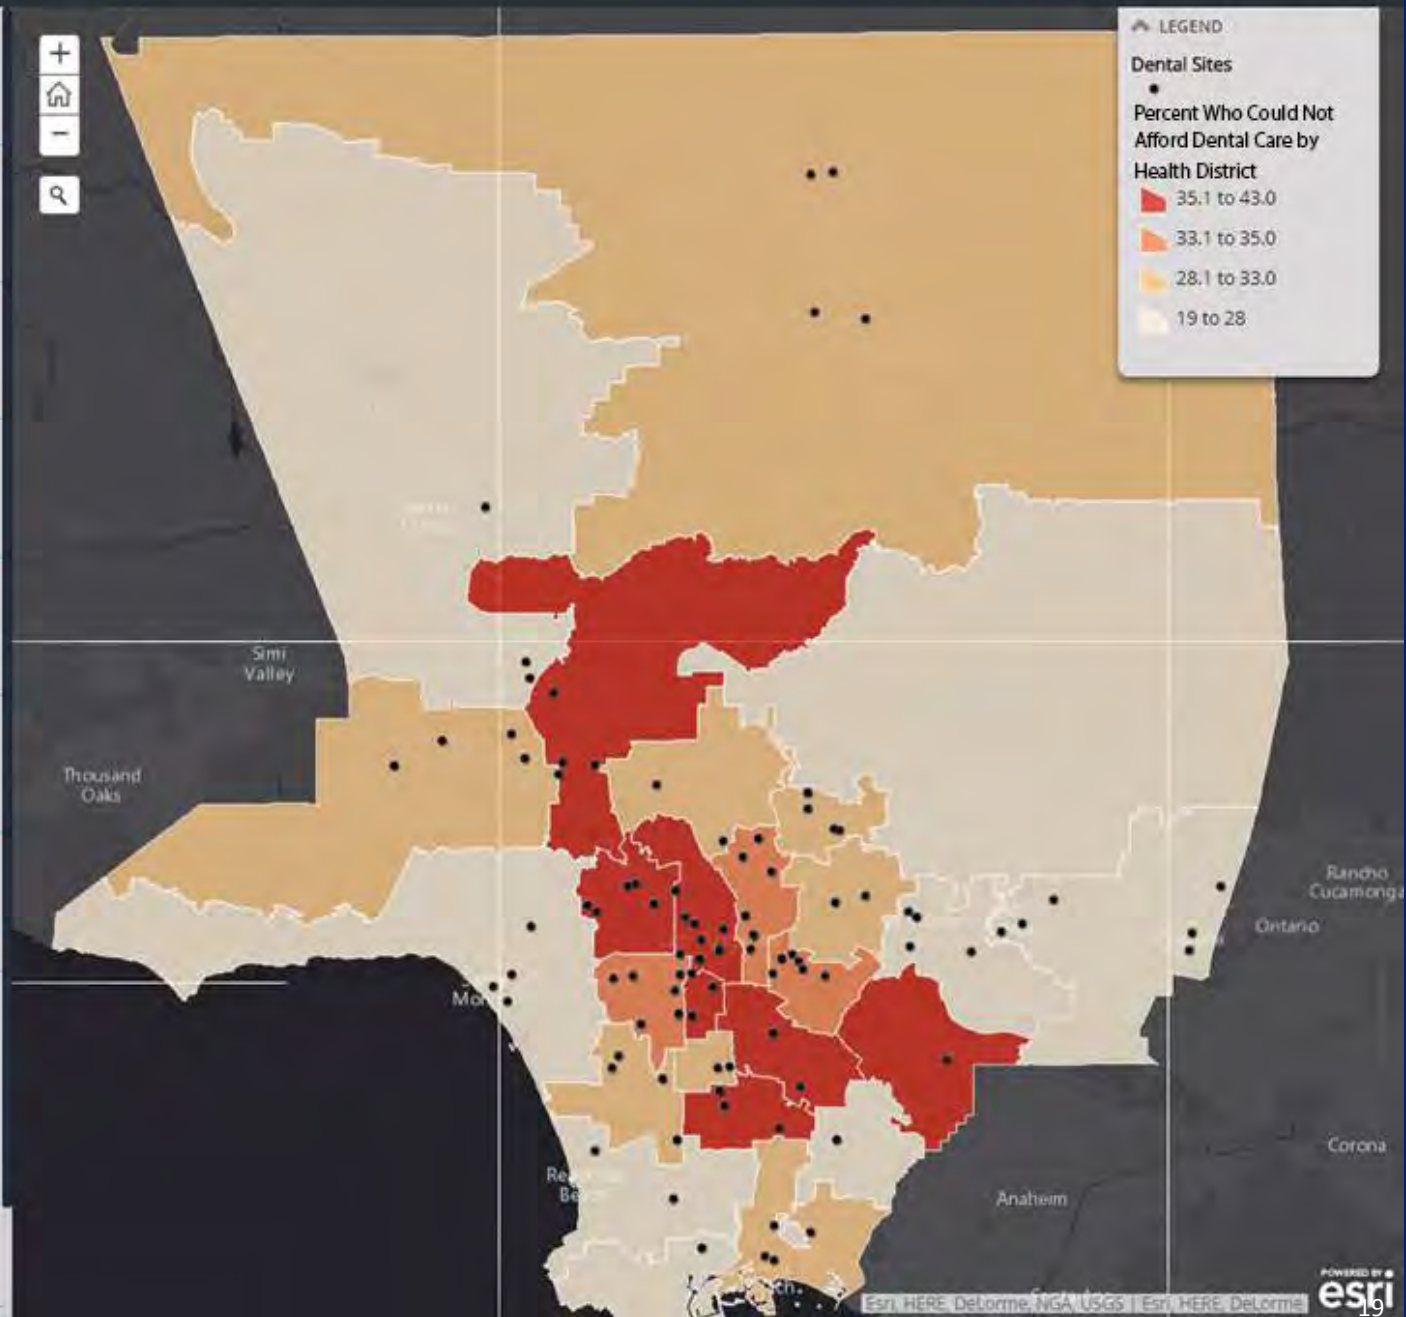

# Dental Services in Los Angeles County

- ▶ 2 Community Clinics
  - ▶ 3 Comprehensive Health Centers
  - ▶ 4 Dental Schools
  - ▶ 5 DHS Medical/Dental Education
  - ▶ 6 FQHC
  - ▶ 7 School-Based
  - ▶ 8 Could Not Afford Dental Care
  - ▶ 9 Have Dental Insurance
- Percent of Adults (18+ years old) Who Do Not Have Dental Insurance Coverage that Pays for Some or All of their Routine Dental Care

# Dental Services in Los Angeles County

- ▶ 1 Dental Sites (All)
  - ▶ 2 Community Clinics
  - ▶ 3 Comprehensive Health Centers
  - ▶ 4 Dental Schools
  - ▶ 5 DHS Medical/Dental Education
  - ▶ 6 FQHC
  - ▶ 7 School-Based
  - ▶ 8 **Could Not Afford Dental Care**
- Percent of Adults (18+ years old) Unable to Obtain Dental Care (Including Check-Ups) (in the past year) Because They Could Not Afford it

# Mapping “Dental Deserts”

# Mapping Dental Deserts

**Definition:** Areas in LA County that meet all 3 criteria:

1. Areas with high population density; **AND**
2. Areas of low-income **AND**
3. Areas that have no or insufficient dental services.

# Methods/Sources of Data:

- Maps were created with GIS showing where each facility is located in the LAC area.
- Data provided by the 211 LAC Hot Line,
- My Health LA Database,
- HRSA data on FQHC, and
- City population data was gleaned from the U.S. Census. (Source: 2015 ESRI, Arc GIS)

## Slide 23

---

**NB10**

should this go before the map slides? I think it might help to explain this before you show the maps.

Noel Barakat, 3/16/2016

# Mapping Dental Deserts

**Definition:** Areas in LA County that meet all 3 criteria:

1. Areas with high population density; **AND**

2. Areas of low-income **AND**

3. Areas that have no or insufficient dental services.

# High Density Population:

- Clear definition of population density, but not of “high” density. Population density is the total number of people within a defined area.
- Since the 10 most densely populated cities in the US have an average population density of **> 10,000 people per square mile**, we used that number as the definition of “high” density.

<http://www.governing.com/blogs/by-the-numbers/most-densely-populated-cities-data-map.html>

# Mapping Dental Deserts

**Definition:** Areas in LA County that meet all **3** criteria:

1. Areas with high population density; **AND**
2. Areas of low-income **AND**
3. Areas that have no or insufficient dental services.

IS THE NUMBER OF CLINICS  
AND DENTISTS SUFFICIENT  
FOR THE DEMANDS OF  
THEIR CATCHMENT AREAS?

# What's the acceptable ratio of dentists to patients?

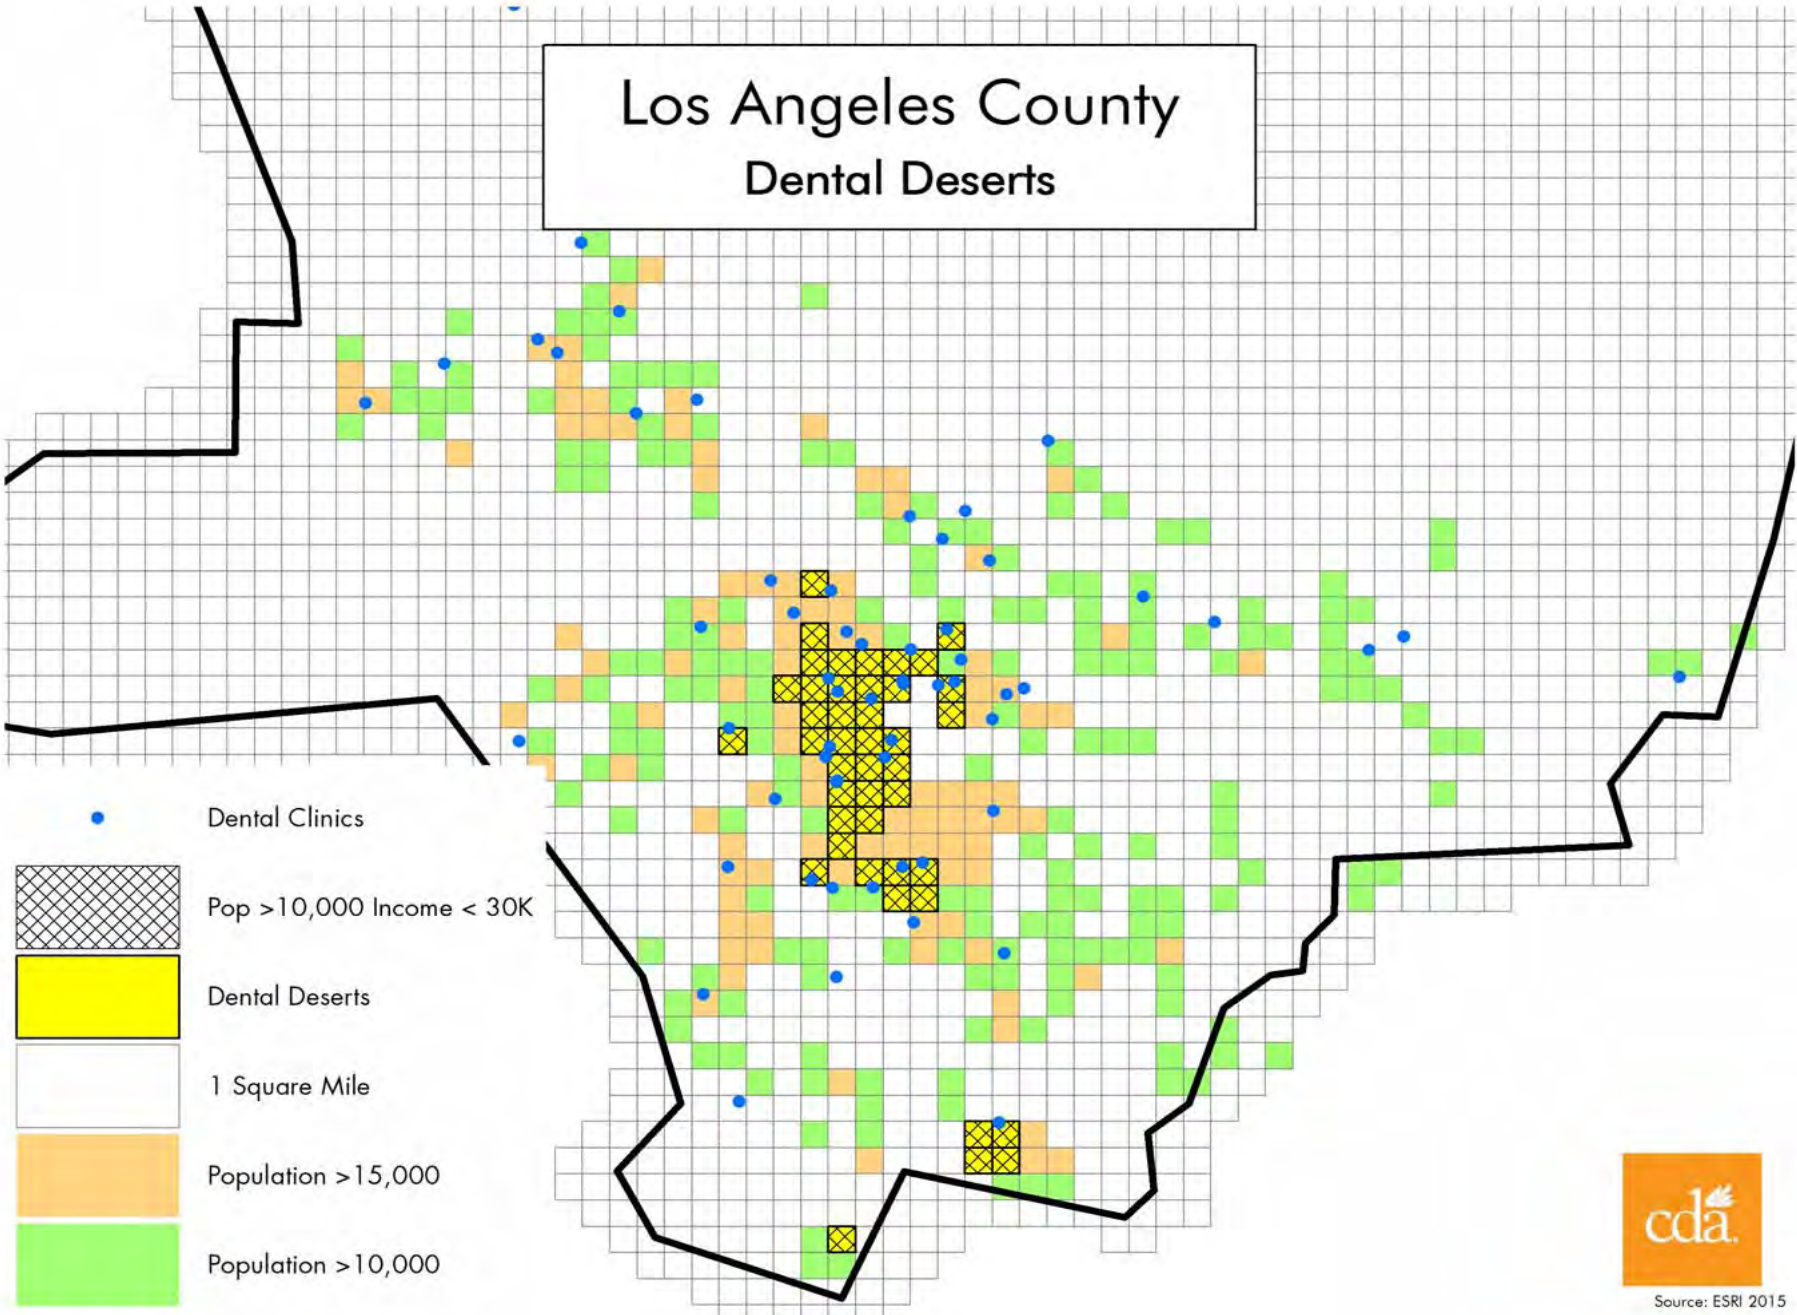

- Centers for Medicare and Medicaid Services recommended ratio of **1** provider for every **1,500** patients.
- California Office of Statewide Health Planning and Development defines a geographic area:
  - **Overutilized** if the ratio of **1** provider for more than **3,000** patients
  - with **unusually high needs**: ratio of **1** provider for more than **4,000** patients

- Each dental clinic has an average 2.5 providers
- We will use the Fed's definition of **an unusually high needs**: ratio of **1** provider for more than **4,000** patients.
- So each clinic's catchment area can serve 10,000 patients.

## Findings:

We found areas which clearly fall within our definition of Dental Deserts based on high-density, low income, and inadequacy of dental services.

Compounding the current  
problem of  
Dental Deserts...

## Ratio per 1,000 residents– Trend in Los Angeles County

2008	2010	2011	2012	2013	2014
0.873	0.726	0.743	0.759	0.777	0.739

The number of dentists per capita have decreasing over time.

Additionally...

Data Source: [AHRF \(HRSA/BHPr\)](#)

[http://www.healthindicators.gov/Indicators/Dentist-rate-per-100000-population\\_130/Profile/Data](http://www.healthindicators.gov/Indicators/Dentist-rate-per-100000-population_130/Profile/Data)

## UCLA Center For Health Policy Research Policy Brief

- **Dentists Moving out of State:** 4% in 2008 up to 14% in the current survey.
- **Dentists Nearing Retirement:** Many dentists in the state are nearing retirement.
- **Specialization:** More and more dentists are leaving general dentistry behind to become a specialist. In 2008, 6% of newly licensed dentists were specialists, up to 13% on 2012.

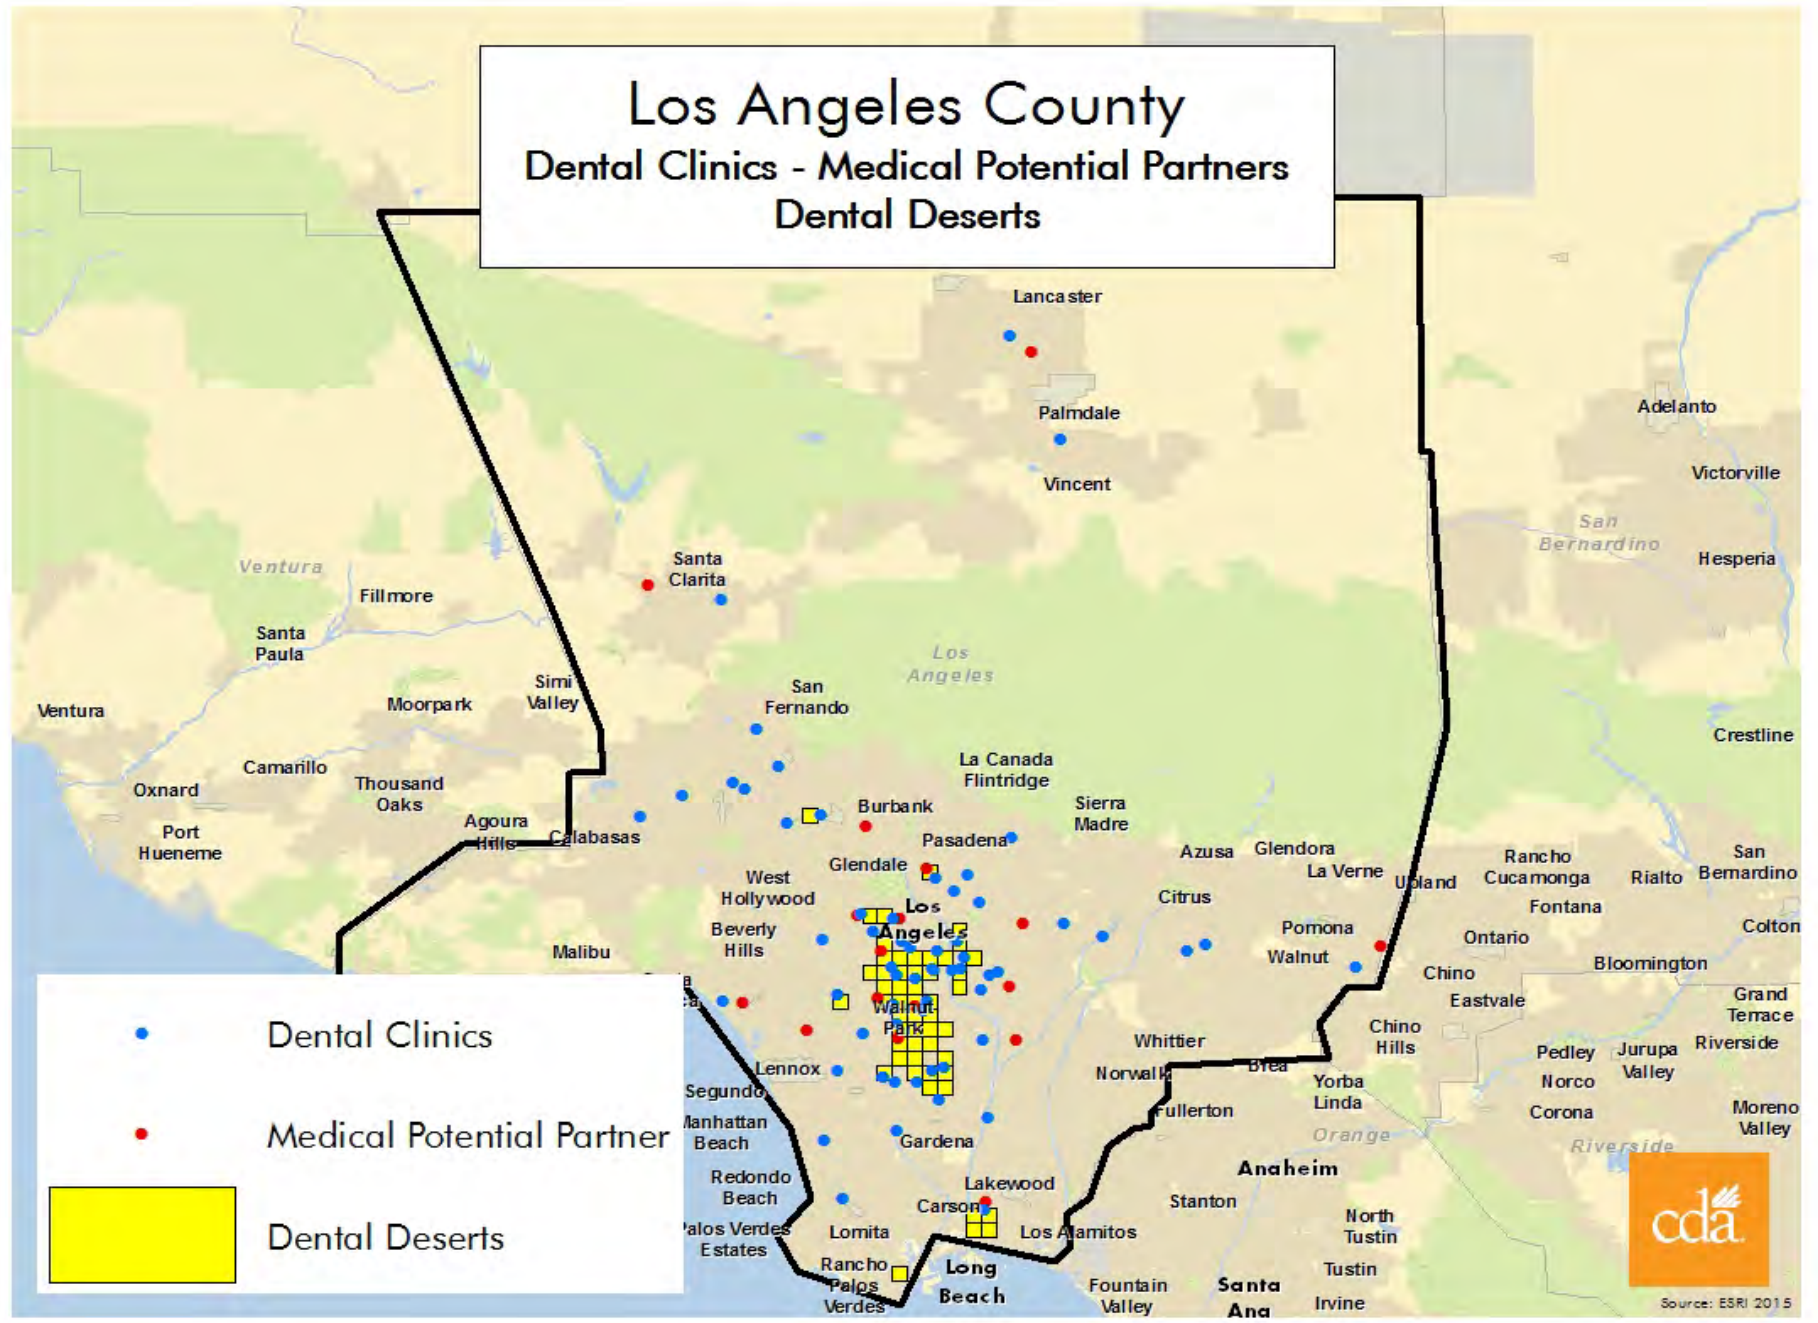

## Next Steps:

- Contact the CA Department of Health Care Services (DHCS) to obtain information regarding fee-for-services providers that are actually billing for dental services.
- Engage **medical** FQHC that could be our potential partners for areas that are truly underserved.
- Expand the loan repayment program (HPSA) to the Dental Deserts to attract additional dentists.

# Los Angeles County Dental Clinics - Medical Potential Partners Dental Deserts

Source: ESRI 2015

## Conclusion/Learned Lessons:

- GIS maps are ideal tools to illustrate the distribution of dental services and should be a standard tool when planning delivery of dental services and analyzing access to care.
- Must be careful to analyze every data set and scrutinize the results in a careful and unbiased manner.
